

Field Notebook · Night Reading Trials

Entry 12. The white-page condition was abandoned after twenty minutes; every subject reported the same 'flashlight' effect and looked away from the screen repeatedly.

Entry 13. The warm dark condition was the clear favourite. Two subjects with existing eye strain read for the full hour without complaint.

Note: this page was saved as an image with no text layer, to mimic a scanned document. A naive 'select all + invert' cannot touch it · the converter must rebuild the pixels, which is exactly the point.
