

Reading in Low Light

A short field report on screens, glare, and eye comfort

Bright pages in dark rooms are a common source of eye strain. In a small informal survey, readers were asked how a document's colour scheme affected comfort during night reading. The results below use colour deliberately, so that a converter can be judged on whether it keeps each hue legible rather than flattening everything to grey.

Figure 1. Reported comfort by theme

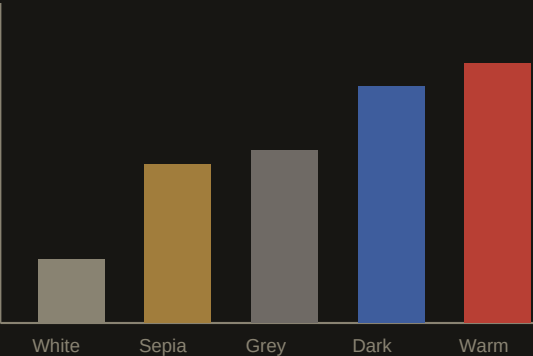

Figure 2. Eye strain over time

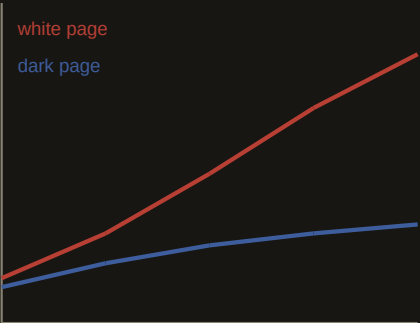

Table 1. Survey summary (n = 40)

Theme	Comfort	Would reuse
White	2.2 / 5	18%
Warm dark	4.5 / 5	88%
Pure dark	4.1 / 5	76%

Figure 3. A photograph keeps its natural colour after conversion, instead of turning into a negative.
